Bridging Globally in Freedom of Exchange

Established in 2022, our mission is to provide financial convenience to individuals seeking to buy and sell cryptocurrencies. With the initial concept of INSTANT our goals of providing a fast and easy-to-use financial platform by connecting buyers and sellers directly with mutually agreed payment methods and prices, **without any interference or control from third parties.**

Our motto "**Bridging Globally in Freedom of Exchange**" we aim for every individual to have the freedom to use and exchange their needs with anyone, anywhere, and anytime.

Overview

InstanX is an escrow service that connects buyers and sellers through various payment methods and mutually agreed-upon prices.

Once an agreement is reached, the buyer sends fiat money directly to the seller's bank account, and we, as the escrow service, take care of the instant distribution of cryptocurrency upon receipt of the funds.

We prioritize data privacy and identity protection for our users.

- New users can carry out activities anonymously through simple user verification feature

- For added security, next verification is available for partners who wish to become merchants on our platform, providing protection against fraudulent sellers.

Every registered user receives a Dynamic Wallet as their identity, and we offer various supporting blockchain networks for users who want to transfer their cryptocurrency to their private wallets.

In summary, our platform operates in a decentralized manner and is not subject to regulation or control from third parties. We do not receive fiat money from any party, and all transactions occur through P2P, ensuring the security and privacy of our users.

Founder & Team

Our team is composed of highly skilled professionals with extensive experience in **finance, technology, and marketing**. Our tech team has over five years of experience in building and running successful Crypto Payment Gateways, and we have launched multiple startups in Gaming, DeFi, and Crypto Exchanges. We take great pride in the professionalism and capabilities of our team, enabling us to consistently deliver exceptional results.

Tech We Use

InstanX platform is constructed with **Go**, an efficient and reliable language. We opted for **Go** due to its performance and simplicity. For the frontend, we employ **Next.js** to ensure a seamless user experience with features like server-side rendering and static site generation.

Additionally, we utilize libraries like **go-ethereum** and **gotron-sdk** for processing web3 transactions, currently we support **EVM-based** networks and the **Tron** network. This enables us to handle various cryptocurrency transactions efficiently and securely.

As of early 2024, we have completed the integration of USDT with the **ERC-20, BEP-20, Polygon, and TRC-20** Network for public use, and the **Solana** Network is currently in the development stage. Our initial target market for release is Southeast Asia (SEA), where we aim to develop a user base and generate initial revenue. We plan to support currencies such as IDR, MYR, THB, PHP, KHR, VND, INR, and BNR.

Market Analysis

● Problem

Traditional centralized cryptocurrency exchanges are prone to hacking due to their online connectivity and storage of large amounts of cryptocurrencies. They also lack privacy, requiring users to provide personal information and undergo time-consuming Know Your Customer (KYC) and Anti-Money Laundering (AML) verification processes.

● Solution

InstanX solves these problems with direct transactions between buyers and sellers, eliminating the need for intermediaries. Funds are held in decentralized wallets, increasing security. P2P exchanges provide enhanced privacy, appealing to privacy-conscious individuals and those in countries with strict cryptocurrency regulations.

P2P crypto exchanges offer a more independent and secure alternative to traditional centralized exchanges, and have become increasingly popular in recent years as more users seek greater control and autonomy over their cryptocurrency transactions.

InstanX provide a more decentralized and secure alternative. P2P popularity has been growing as more users seek greater control and autonomy over their cryptocurrency transactions.

Unique Selling Point

Every platform has its own Unique Selling Proposition (USP), ranging from offering low fees to high liquidity during transactions.

Here are the USPs that we have, which may not be found or have not yet been found on other platforms:

- ✓ **Easy and instant user verification**
- ✓ **Very easy user flow**
- ✓ **Ease of becoming our partner as a merchant**
- ✓ **Fees that are generally cheaper compared to similar businesses**
- ✓ **Modification and addition of features that are up to date, based on user needs**
- ✓ **High liquidity, due to investors and partners who also use our platform in their current ecosystem**

Features

P2P Trade

The P2P Trade feature is a feature where we, InstanX, act as an escrow to facilitate cryptocurrency buyers and sellers who can negotiate prices and types of payment directly, also known as peer-to-peer.

P2P Live

P2P Live is a feature that enables face-to-face or live transactions between buyers and sellers. Buyers or sellers can use cash for in-person transactions with the seller or buyer of cryptocurrencies directly at a pre-agreed time and location.

P2P Flash

P2P Flash is similar to the previous feature, P2P Trade, with the key difference being higher liquidity and faster transaction speeds. To become a partner in this feature, every merchant must upgrade to become a premium merchant, and we only select a very limited number of partners to join or use this P2P Flash feature.

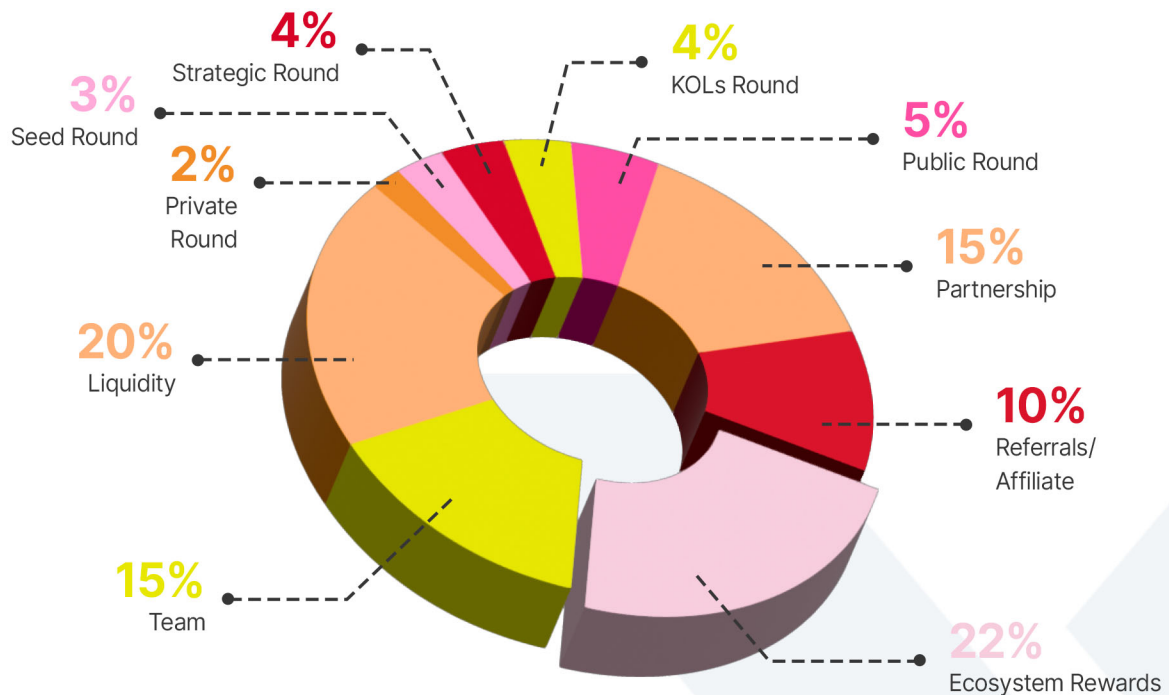

Widget Ramp

The Ramp Widget feature is quite unique, as every feature or service you use on the InstanX platform can also be used on other websites that use our widget code. Without needing an IT background, anyone can use the P2P feature on their website by implementing or integrating the InstanX Ramp widget feature on their website.

Tokenomics

Category	Content
Project Name	InstanX
Industry	De-Fi
Ticker	\$IX
Network	ERC-20
Total Supply	100,000,000
TGE Price	\$0.12
TGE Circulation	1,000,000
TGE Marketcap	\$120,000
TGE FDV	\$12,000,000
Amount to Raise	\$1,500,000

	Allocations	Tokens	TGE	Vesting

Utility

The **\$IX** token is meticulously crafted for seamless integration across every facet of the platform, ensuring continuous benefits and an extensive array of exclusive privileges for all **\$IX** holders. These privileges are regularly updated to enrich the user experience.

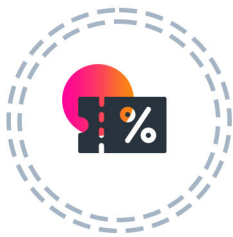

Profit Sharing

A portion of InstanX profits generated from every transactions could be distributed to **\$IX** token holders. This aligns user benefit with platform growth.

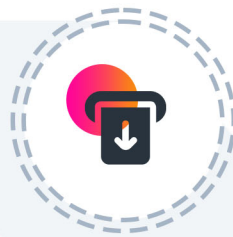

Loyalty Programs

\$IX tokens can be used to participate in loyalty programs or exclusive events hosted by InstanX. This can help increase user engagement and loyalty to the platform.

Fee Discounts

Users can get 20% off for transaction fees when paying with **\$IX** token

Free Withdrawal Fee

Our system will eliminate withdrawal fees when paying with **\$IX** token

Rewards and Incentives

Users can earn **\$IX** tokens as rewards for participating in activities or engaging with the platform. These tokens can then be redeemed for various rewards or used to unlock exclusive content.

Cross-Promotions

InstanX will partner with other platforms or projects to offer **\$IX** tokens as part of cross-promotional campaigns. This can help increase the visibility and adoption of the **\$IX** token.

Revenue Model

InstanX business model is based on providing a platform or marketplace that connects buyers and sellers directly, without intermediaries. Our platform serves as an escrow that holds the cryptocurrency until the buyer sends the agreed-upon fiat currency to the seller's bank account.

We earn revenue by conducting transaction fees on successful only trades made on InstanX platform

InstanX generate revenue through other means such as:

- | | |
|----------------------------|---------------------------------------|
| 01 Transaction | 06 Margin Trading |
| 02 Merchant | 07 Widget Ramp |
| 03 Advertising | 08 B2B Development Business |
| 04 Premium Merchant | 09 Subscription Based Services |
| 05 Verified Badge | |

In the next development we will earn interest on funds held in user accounts or engage in other investment activities such as DeFi features.

As of early 2024, we have completed the development of all the features outlined in our documentation, including the blockchain network, cryptocurrency, and the fiat currency to be used. However, we cannot launch everything all at once. Instead, we will open features gradually to maintain liquidity and user security.

During the past year, we self-funded to build the InstanX platform. The following is the roadmap or goals we aim to achieve in the coming months:

2023

Development Phase

2024

Q1 : Testing Phase
Q2: Private Round
Q3: Platform launch for public in the SEA market
Q4: Complete the development of the InstanX Mobile & Telegram Apps

2026

This year, our main focus is on partnering with several web3 projects to integrate their tokens with our platform API. We're also focusing on developing DeFi features such as fiat staking, launchpad functionality, and automated market makers (AMM).

2025

Q1 : Token Sale & TGE
Q2: Release the Mobile & Telegram Apps
Q3: Massive KOLs Branding
Q4: Listing on several exchangers

We are excited

to share our vision for the future of Bridging
Globally and to continue building a
community-driven platform that meets the
needs of our users
